

Sardar Vallabhbhai National Institute of Technology, Surat

M. Tech for working Professionals

Course Structure and Scheme of Evaluation (Semester wise)

(Approved by 65th meeting of Senate dated August 25, 2025)

Sr. No.	Subjects	Code	Scheme* L-T-P	Credits (Min.)
First Semester				
1.	Advanced Design of Concrete Structures (CEST 131)		3-0-2	4
2.	Elective 1		3-1-0	4
			Total	8
Second Semester				
1.	Advanced Concrete Technology (CEST 132)		3-0-2	4
2	Elective -2		3-1-0	4
			Total	08
Third Semester				
1.	Foundation Design of Structures & Soil-structure Interaction (CEST 203)		3-1-0	4
2.	Elective-3		3-1-0	4
			Total	08
Fourth Semester				
1.	Earthquake Resistant Design of Structures (CEST 204)		3-0-2	4
2	Elective-4		3-1-0	4
			Total	08
Fifth Semester				
1	Seminar (CEST 301)		-	4
2.	Dissertation Preliminaries (CEST302)			16
3				
			Total	20
Sixth Semester				
1.	Dissertation (CEST303)			20
				72+08**
			Total	80

* Scheme 3-0-2/ 3-1-2/3-0-0/3-1-0

**Two SWAYAM/ NPTEL (MOOC) Courses of 8 credits as decided by the DAAC of the respective department be completed within first two years.

Elective 1			
Code	Course Name	Scheme	Credit
CEST 133	Cold Formed Steel Design	3-1-0	4
CEST 134	Experimental Stress Analysis	3-1-0	4
CEST 135	Mechanics of Composite Materials	3-1-0	4

Elective 2			
Code	Course Name	Scheme	Credit
CEST 136	Structural Dynamics	3-1-0	4
CEST 137	Theory of Plates and Shells	3-1-0	4
CEST 138	Finite Element Methods in Structural Engineering	3-1-0	4

Elective 3			
Code	Course Name	Scheme	Credit
CEST 205	Rehabilitation of Concrete Structures	3-1-0	4
CEST 206	Structural Vibration Control	3-1-0	4
CEST 207	Design of Formwork Systems	3-1-0	4

Elective 4			
Code	Course Name	Scheme	Credit
CEST 208	Fire Resistant Design of Buildings	3-1-0	4
CEST 209	Design of Bridge Structures	3-1-0	4
CEST 210	Advanced Design of Steel Structures	3-1-0	4

CEST 131: Advanced Design of Concrete Structures

L	T	P	Credit
3	0	2	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Extend knowledge and proficiency to apply the provisions of relevant IS-code for design of appropriate type of combined shallow foundations with detailed report and drawings.
CO2	Design deep foundations like pile and pile caps for various soil and loading conditions with detailed sketch.
CO3	Enhance knowledge for the advanced design concepts of flat slab
CO4	Learn complete design procedures for retaining walls, shear walls and grid floors
CO5	Calculate serviceability criteria for deflection and crack width.

2. Syllabus:

Topics	Hours
• Design of combined shallow foundations: Design of combined footings on boundary of plot, Strip footing, Strap footing, Raft foundation with IS provisions.	10
• Design of deep foundations: Pile foundation, Soil design and structural design of pile. Load carrying capacity of pile in sandy soil, clayey soil. Pile resting on rock. Design of group of piles. Design of pile cap	07
• Design of RCC Flat slabs: Merits and Demerits of flat slabs as compared to other floor systems. Drop and capital in flat slab. Direct design method and equivalent frame method. IS provisions related to flat slab. Effect of opening in design of flat slab.	07
• Design of retaining walls: Different components of cantilever and counterfort retaining wall with and without surcharge. Check for overturning and check for sliding. Provision of key wall.	06
• Design of shear-wall: Classification of shear walls, loads in shear wall, design of rectangular and flanged shear walls, coupled shear wall	06
• Introduction and Analysis of Grid floors for large span structures.	06
• Serviceability criteria of crack width: Calculation of deflection due to load, shrinkage & creep and calculation of crack width as per IS code.	03

[Total Theory Hours: 45]

3. Practical:

- Structural Modelling Techniques- Gravity load generation, Nodal Load, member Load, Area Load/Floor load, defining shear wall etc.
- Developing structural models using graphical user interphase (GUI) of Integrated structural analysis and design software [ETABS, MidasGen etc.] Understanding preprocessing and post processing phases for solving analysis problem. Integrated analysis and design of RC building frames under gravity and seismic loading
- Computer Modelling and linear analysis of skeletal structural systems- Plane and space trusses, beams, plane frames and grids
- Development of spreadsheet tools using Excel/VBA for analysis and design of structural elements

5. CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	3	3	3	1	3
CO2	3	3	3	3	2	3
CO3	3	3	3	3	2	3
CO4	3	3	3	2	2	3
CO5	3	3	3	3	2	3

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 133: Cold Formed Steel Design

L	T	P	C
3	1	0	4

1.Course Outcome (COs):

At the end of the course the students will be able to:

CO1	Have the knowledge of cold formed steel and general uses and approach to design, structural behavior
CO2	Design of cold formed compression, flexural members for various needs.
CO3	Get the knowledge of connection for cold form steel members.
CO4	Enhance the knowledge for roof structure, light frame construction using cold form steel.
CO5	Learn the complete design and uses of cold formed steel in field

2.Syllabus:

Topic	Hours
Introduction: Types of cold formed steel section, design specification, general design consideration design basis, serviceability material used in cold formed steel construction.	05
Strength of thin elements and design criteria: Structural behaviour of compression elements and effective width design criteria, Direct strength method and consideration of local and distorted buckling, perforated elements and member plate buckling of structural shape.	09
Flexural members: bending strength and deflection, design of beam web, bracing requirement of beam, torsional analysis of beam- example.	09
Compression members: Column buckling, distorted buckling strength of compression members, Built-up compression member- Design example.	08
Connections: Type of connector welded connection, bolted	06
Roof structure: Steel shear diaphragms, shell roof structure, corrugated sheets.	06
Light frame construction: Framing standards, design bridges	02

[Total Theory Hours: 45, Tutorial Hours: 15]

3. References:

2. Punmia, B. C. (2018). Design of steel structures.
3. Shiyekar, M. R. (2015). Limit state design of steel structures (3rd ed.).

4. Dr. I. C Syal and Satinder Singh – “Design of Steel Structures 2nd edition”
5. Dugal, S. K. (2016). Limit state design of steel structures. McGraw Hill Publication.

Tutorial: The theoretical questions and numerical will be given as assignment to the students based on theory topics.

4.CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	3	3	3	1	3
CO2	3	3	3	3	2	3
CO3	3	3	3	3	2	3
CO4	3	3	3	2	2	3
CO5	3	3	3	3	2	3

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 134: Experimental Stress Analysis

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to

CO1	Demonstrate state of the art measurement techniques of strain gauges and system of transducers to acquire force – deformation information.
CO2	Acquire the knowledge of photoelasticity fringe order to measure the principal stresses for 2D objects
CO3	Apply the brittle coating methods in analysis of cracking behavior.
CO4	Conduct the structural audit for applying appropriate various non-destructive tests.
CO5	Implement appropriate elastic failure theories in analysis and design of structures

2. Syllabus:

Topics	Hours
Introduction to stresses and strains, plane stress and plane strain problem, Cauchy's strain displacement relations, generalized Hook's law dimensional analysis and theory and practice of direct and indirect model techniques.	02
Mechanical and electrical gauges, optical gauge, pneumatic and acoustical gauges, transverse sensitivity of strain gauges, temperature compensation of gauges, bonded and unbonded gauges, strain gauge rosettes	08
Load application and its measurement using gauges and use of deflection gauge for various structural systems/elements.	05
Brittle coating techniques and its applications to know the crack patterns qualitatively of structures for various loadings. Moire and grid techniques for patterns of cracks.	07
Introduction to holography and interferometry, two- and three-dimensional photo-elasticity, photo elastic coatings, analogies, ideal properties of photo- elastic materials. Diffused light and lens polariscope, plane and circular polariscope. Application digital image correlation.	06
Introduction to non-destructive testing techniques like Rebound hammer method, Ultra pulse velocity test, core test etc. and its field applications. Interpretations of test results	06
Introduction to LVDT, X-rays technique, vibration measurement and application of shake table to get required desired data of various technical parameters. Application of DAQ system.	05
Theories of elastic failures like. Maximum principal stress theory, maximum principal strain theory, maximum shear stress theory, maximum strain energy theory and maximum shear strain energy theory etc., and its application in structural engineering.	06

 5. K. Ramesh, Digital Photo elasticity – Advanced Techniques and Applications, Springer, 2000.
-

Tutorial: The theoretical questions and numerical will be given as assignment to the students based on theory topics.

4. CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	2	2	3	1	2	3
CO2	1	1	2	2	3	2
CO3	2	1	3	3	3	3
CO4	3	2	3	3	3	3
CO5	2	1	3	3	3	3

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 135: Mechanics of Composite Materials

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to

CO1	Understand the phenomenon of composite material and learn the characteristics of different composite materials
CO2	Analyze problem on macro mechanical and micromechanical behavior of a lamina.
CO3	Learn transformation matrix and laminate constitutive equations for isotropic, anisotropic and orthotropic laminates
CO4	Evaluate the lamina properties from laminate tests and understand their behaviour
CO5	Solve problem on free vibration, bending and buckling of laminated plates and unidirectional beams.

2. Syllabus:

Topics	Hours
Introduction to Composite Materials Constituents, Applications Definition – Need – General Characteristics, Applications.	05
Fibers – Glass, Carbon, Ceramic and Aramid fibers. Matrices – Polymer, Graphite, Ceramic and Metal Matrices – Characteristics of fibers and matrices.	07
Macromechanical and Micromechanical behavior of a lamina, Lamina Constitutive Equations.	05
Generalized Hooke's Law, Reduction to Homogeneous Orthotropic Lamina – Isotropic limit case, Orthotropic Stiffness matrix, Typical Commercial material properties, Rule of Mixtures.	04
Generally Orthotropic Lamina –Transformation Matrix, Transformed Stiffness	02
Macromechanical behavior of a laminate, Definition of stress and Moment Resultants, Strain Displacement relations.	02
Basic Assumptions of Laminated anisotropic plates, Laminate Constitutive Equations – Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli.	04

Evaluation of Lamina Properties from Laminate Tests, Quasi-Isotropic Laminates. **06**
 Determination of Lamina stresses within Laminates, Maximum Stress and Strain
 Criteria, Von-Misses Yield criterion for Isotropic Materials.

Generalized Hill's Criterion for Anisotropic materials. Tsai-Hill's Failure Criterion for **06**
 Composites. Tensor Polynomial Failure criterion. Prediction of laminate Failure
 Equilibrium Equations of Motion, Energy Formulations. Static Bending Analysis,
 Buckling Analysis. Free Vibrations – Natural Frequencies Modification of Hooke's
 Law due to thermal properties - Modification of Laminate Constitutive Equations.

Orthotropic Lamina - special Laminate Configurations – Unidirectional, Thermally **04**
 Quasi-Isotropic Laminates, Delamination, Matrix Cracking, and Durability,
 Interlaminar stresses, Edge effects, Fatigue and fracture, Environmental effects,

[Total Theory Hours: 45, Tutorial Hours: 15]

Tutorial: The theoretical questions and numerical will be given as assignment to the students based on theory topics.

4.CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	2	3	3	2	2
CO2	3	3	2	2	1	3
CO3	2	3	3	3	2	3
CO4	3	3	2	2	1	2
CO5	3	2	3	3	2	2

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 132: Advanced Concrete Technology

L	T	P	C
3	0	2	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Demonstrate cement hydration and its microstructure development.
CO2	Understand the concepts of special concrete and its mix design procedure.
CO3	Apply the Rheometers and corrosion analyzer systems for measurements in fresh and hardened concrete properties
CO4	Analyze the various durability related problems in reinforced concrete and its mitigation.
CO5	Create the relation of various concrete deterioration issues with microstructural features.

2. Syllabus:

Topics	Hours
HYDRATION OF CEMENT AND ADVANCE CHARACTERIZATION TECHNIQUES Hydration of Cements and Microstructural development, Mineral additives, Chemical admixtures, Cracking and Volume stability, Deterioration processes, Special concretes, Advanced Characterization Techniques, Sustainability issues in concreting, Modelling properties	11
ADVANCE MIX DESIGN AND RHEOLOGY OF CONCRETE Advanced Mixture Design, Design Philosophy - Particle Packing & Rheology - Discrete and Continuous approach, Packing density of powders and aggregates - Experimental tests and Models, Ternary Packing Diagram, Mixture Design of Self - Compacting Concrete (SCC); pervious concrete, Aerated concrete, Ultra high performance fibre reinforced concrete (UHFRC), Fresh Concrete Properties, Empirical test for SCC – Rheology, Basics, Parameters, Models, Rheometers, Rheology of Paste and concrete – Pumping, Setting, Curing, Plastic shrinkage, Strength Development, Maturity Method; Hardened Concrete Properties, Factors influencing strength, Interfacial Transition Zone, Stress strain relationship – Localization, End effects, Loading Conditions; Dimensional Stability, Creeping Shrinkage	14
DURABILITY OF CONCRETE Durability, Permeability and Porosity, Chemical attack (Sulphate attack, Delayed Ettringite Formation, Chloride attack, Acid Attack, Sea Water attack, Carbonation, Freezing and Thawing, Alkali aggregate reaction, Alkali carbonate reaction Corrosion, Mode of action, failure, Tests & Protection methods	10

- **REBAR CORROSION AND ITS EFFECTS**

10

Rebar Corrosion, Factors inducing rebar corrosion, electrochemical process, role of chloride in corrosion, role of carbon-di-oxide in corrosion, onset of corrosion, corrosion propagation, and service life prediction of concrete structures.

[Total Theory Hours: 45]

3. Practical:

- Stress-strain behaviour of Mild Steel using Mechanical Gauge (Huggen burger extensometer)
- Modulus of Elasticity of Concrete using Compressometer
- Behaviour of RC Beams under Flexure (under- and over-reinforced)
- Behaviour of RC Beams under Shear
- Behaviour of RC Beams under Torsion
- Behaviour of RC Short Reinforced Columns under Axial Compression

5. CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	3	3	3	1	2
CO2	3	3	3	3	2	3
CO3	3	2	3	3	2	3
CO4	3	3	2	2	3	3
CO5	3	2	3	3	2	3

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 136 : Structural Dynamics

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Comprehend the structural vibration, its characterization and develop simplest modelling approach for complex structure
CO2	Define structural damping and appropriate springs by considering different end conditions.
CO3	Apply suitable analysis approach for a special structure & its implementation.
CO4	Conceptualize vibrating body for free and forced vibration.
CO5	Analyse the behaviour of special structures and their adaptivity by considering different forced vibration.

2. Syllabus:

Topics	Hours
Introduction to Dynamics – Cause and effect of vibration, various types of pulses of vibration, single degree of freedom with and without damping, Free and forced vibration. Types of damping, viscous damping, critically damped system. Response of harmonic excitation, Dynamic equilibrium equation and solution, damping factor, Logarithmic decrement, Dynamic magnification factor, Eigen value, Problems on response of one degree of freedom system in harmonic loading.	09
Dynamics of beams – Resonance, dynamically sensitive structure – flexural vibration of uniform beams; Bernoulli – Euler Theorem, natural frequencies and mode shapes for five different end conditions of beams. Importance of first mode, and higher mode for various field problems. Dhumel integral, Blast load, Fourier analysis. Long span post-tension beam.	08
Introduction to Multi Degree freedom system – Idealization of actual problem, continuous mass v/s Lumped mass, natural frequencies and mode shapes. Introduction to modal analysis, free vibration analysis and it's important in seismic analysis. Approximate time period of different structures, Concept of response spectrum, Introduction of CQC and SRSS Method.	09
Modal analysis - Approximate formula for quick determination of natural frequencies and mode shape for beam, plate – square shape, circular shape with different end conditions at edges. Time period for elevated water tank and Bridge pier. Pipe supporting structure & Oil tank. I.S. code permissible limits of vibrations for machine and its foundation. Floor vibration in Industrial structure, Acceptance criteria for floor vibration, Fundamentals of Time history analysis & synthetic time history.	09
Introductions to Wind induced vibration - tall chimney, Von-karman Street formation, Strouhal number applications, vortex shedding frequency, Galloping of cable, Negative damping of cables. Numerical for Vortex shedding frequency.	04

[Total Theory Hours: 45, Tutorial Hours: 15]

Tutorial: The theoretical questions and numerical will be given as assignment to the students based on theory topics.

4. CO-PO-PSO Mapping:

COs	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	2	3	3	3	2
CO2	3	3	2	2	2	1
CO3	2	1	3	3	2	2
CO ¹	3	2	1	3	3	2
CO5	3	3	3	3	3	3

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 137: Theory of Plates and Shells

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Explain the concepts of bending and membrane theory
CO2	Develop analytical methods of solution for thin plates and shells
CO3	Predict the behaviour of plates and shells under applied loading
CO4	Identify solution to complex problems using numerical techniques and tools
CO5	Demonstrate the knowledge and skills obtained to challenges in practice

2. Syllabus:

Topics	Hours
• Plates: Introduction, classification, classical plate theory: Kirchhoff's theory for thin plates, differential equation of equilibrium of rectangular plates for bending in one and two directions, plates with various boundary conditions, geometries and loading, classical solution of plate equations: the Navier solution and the Levy solutions, differential equation of equilibrium of circular plates for bending, solutions for circular plates under axi-symmetrical loading, energy method, numerical method: finite difference method, buckling of plates, vibration of plates: free vibrations, application to design of rectangular water tank.	24
• Shells: Introduction, classification, definitions, membrane theory of cylindrical shells, bending theory of cylindrical shells subjected to axi-symmetrical loading, beam theory of cylindrical shells, introduction to shells of double curvature, membrane theory of shells of revolution, application to design of circular water tank.	21

CO1	3	2	3	3	3	2
CO2	3	3	3	3	2	2
CO3	3	3	3	3	3	3
CO4	3	2	3	3	3	3
CO5	3	2	3	3	3	3

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 138: Finite Element Methods in Structural Engineering

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Illustrate the basic concepts of finite element (FE) analysis.
CO2	Identify and select the suitable element and mesh configuration to obtain converged solution.
CO3	Develop the element characteristic equation and generation of global equation
CO4	Create 1D, 2D and 3D FE models of practical problems
CO5	Apply the FE analysis on actual problem to determine induced displacements, forces, stresses and strains

2. Syllabus:

Topics	Hours
Introduction: Matrix algebra, Fundamentals of continuum mechanics, Stresses, displacements and strains in solids, Constitutive relations and models. Differential equations in solid and soil mechanics. Analytical and Numerical Solutions: Closed form solutions, why study numerical analysis? Numerical methods - FDM, FEM and DEM. Introduction to FEM	06
Formulations in FEM: Direct stiffness-matrix method, Potential energy method, Rayleigh-Ritz method, Weighted Residual method: Galerkin's Method, Errors in FEM.	06
One-and Two-Dimensional Problems: Plane stress and strain, Interpolation functions, Shape functions (Lagrangian/Natural), Isoperimetric elements – 1D and 2D, Numerical integration. Infinite elements, Lagrangian Element, Joint elements, Serendipity elements, Transition elements, Assembly and Solution techniques, Convergence requirements, Patch test.	10
Axisymmetric Problems: Formulation and Examples.	06
Three-Dimensional Problems, Constitutive Modelling: Formulation and Examples, Elastic, Elastic-plastic and constitutive models for structural engineering applications.	05
FE Analysis in Structural Engineering: Preprocessing and Post processing, Applications: Heat transfer and mass transport, Thermal stresses, Vibration and Buckling (the eigenvalue problem), Linear and Non-Linear Analysis of Trusses, Beams, Frames, Shells, and plates with dynamic, material and geometric nonlinearities considerations.	12

[Total Theory Hours: 45, Tutorial Hours: 15]

Tutorial: The theoretical questions and numerical will be given as assignment to the students based on theory topics.

CEST 203: Foundation Design of Structures & Soil-Structure Interaction

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Interpret laboratory and field-testing results for foundation design.
CO2	Comprehend soil investigation reports and suggest the suitable type of foundation.
CO3	Design shallow and deep foundation, various machine foundations
CO4	Evaluate bearing capacity and settlement of shallow and deep foundations using various approaches
CO5	Apply the acquired knowledge for the design of special foundation.

2. Syllabus:

Topic	Hours
Soil Properties, Soil Exploration and Soil Improvement Techniques: Soil properties and its applications, Laboratory testing, Soil exploration techniques – comparisons, sounding tests, Geophysical methods, Sampling, Interpretation of Laboratory & field Testing, liquefaction, Quick Sand Condition, Introduction to Injection and grouting, Prefabricated vertical drain, Basic of vibroflotation, stone column.	09
Introduction to Shallow Foundation and Earth Retaining Structures: Soil Investigation Reports study, bearing capacity of soil, classification and designing of Shallow Foundation, Settlement of Foundations, Foundation on collapsible and expansive soil, Earth Reinforcement, RE wall, Gabion wall concept, Rock Anchoring, Diaphragm technique, Diaphragm wall with anchor, Box Pushing, Cantilever Retaining wall & Counterfort Retaining wall, Drainage for Retaining wall, Bridge Abutment wall.	07
Introduction Deep Foundation: Caisson foundation, Cellular cofferdam, Braced-cut and Drainage	03
Machine Foundation: Types of machine foundation, General criteria, Theory of vibration, Single degree freedom system, Soil dynamic parameters, Block type machine foundation (Checking of resonance and permissible amplitude), vibration isolation techniques	08
Pile Foundation: Types of piles, Factors affecting choice of types of piles, Pile load test, Load carrying capacity of piles, Pile group, Group efficiency, Lateral resistance of piles, settlement of piles, Negative skin friction	08
Special Foundations: Classification of Foundation, Special foundations, Raft foundation, types of rafts, Beams on elastic foundation, footing subjected to moments, Footing subjected to tension, Geotextiles, various methods of foundation	10

design, Technological consideration in Geotechnical Engineering. Idealization of soil-structure interaction. Concept of Non-linear Winkler foundation

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 205: Rehabilitation of Concrete Structures

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Identify the types of distress in structures to illustrate the level of damage- to analyze the course of damage in structures- to identify various repair material- special material.
CO2	Comprehend the mechanisms of damage, remedial measures for structures including building/bridges and relate materials properties.
CO3	Apply suitable techniques for repair and rehabilitation of structures including bridges and buildings- and to choose proper repair materials.
CO4	Conduct the destructive and non-destructive tests and infers its results- to conclude the strength and interpretation of result for applying methods for repairing.
CO5	Evaluate the actual behavior of structures and proper method for retrofitting- and also techno legal aspect of rehabilitation or retrofitting of structures.

2. Syllabus:

Topics	Hours
• INTRODUCTION: The repair process- plain concrete: a review: introduction to concrete- materials for making concrete- fresh concrete- structure of concrete- hardened concrete- physical and chemical characteristics of cement composites	05
• MAINTENANCE & REPAIR OF STRUCTURES: Different Prestressing Need for maintenance and repairs Inspection of Structures for repairs and maintenance methods. for repairs- material and methodology for repairs- Cost of repair & maintenance- Repair to foundation columns- piles- floor- roof and walls	05
• DETERIORATION MECHANISM: Chemical and physical causes (corrosion)- basic corrosion processes of steel in concert- Corrosion cell- Phases- Pourbaix-Diagram- types of corrosion- factor affecting the rate of corrosion- role of chlorides- corrosion protection techniques a) cathodic protection b) chemical inhibitors- c) re-passivation (patch repairs) d) protection by alkalization f) electrochemical chloride removal; Freeze-thaw durability of concrete- freeze-thaw mechanism- air entrainment-damages due to freeze-thaw- influencing factors- protection methods against freeze-thaw Volume changes- alkali-aggregate reaction in concrete alkali- silica reaction-mechanism- alkali reaction with amorphous silica- alkali reaction with silicates caused by reactions in polyphase siliceous aggregates (shale- granite- sandstone)- alkali carbonate reaction- mechanism of ASR- effects of alkali aggregate reaction- typical cracking due to alkali- aggregate reaction- swelling of the concrete due to alkali-aggregate reaction- factors affecting alkali-aggregate reaction	07

Sulphate attack in concrete sulphate attack of on concrete- sulphate attack mechanism- damages due to sulphate attack- influencing factors- protection methods against sulphate attack

Exposure condition of RC structures- durability- exposure condition- freezing exposure- coastal exposure- acid and thermal exposure- soil exposure

- **INSPECTION AND EVALUATION OF CONCRETE:** Introduction- preliminary consideration- condition survey- in situ compressive strength- locating delamination and cracks- locating embedded steel- monitoring movements and stresses- corrosion evaluation- destructive methods- core-sampling- laboratory tests- load testing **04**

- **DAMAGE EVALUATION – DEFECT AND CRACKING OF CONCRETE:** Philosophy & definition- causes of failure- failure in ancient time & recent times. Deficiency in design drag- material production- construction and use maintenance etc. Failure related problems; Manmade and natural failure or damage. Diagnosis of failure; change in appearance on an exposure- chemical deterioration- Mechanical deterioration. Cracking in buildings. Failure of flat roofs- balconies- trenches- dams- piles abutments piers- silos- chimney- cooling towers- reinforced cement concrete (RCC) frames- Failure information & Analysis. **05**

- **CONCRETE REPAIR AND REHABILITATION OF DISTRESS STRUCTURES:** Defect in concrete structures- performance requirements- repair process- repair materials- materials selection- repair methods and placement inspection and testing distressed structures- techniques for rehabilitation of concrete structures- retrofitting of structures. Format of investigation. shear- torsion compression failure- erection difficulty- failure in tanks silos- space frame- precast assemblies prestressed concrete structure- formwork failure- case studies. **07**

- **INTRODUCTION OF FRP STRENGTHENING CONCRETE STRUCTURES:** Introduction- FRP materials- evaluation of existing structures- flexural strengthening shear strengthening- column strengthening- installation of FRP strengthening systems quality control and quality assurance- additional applications- field applications. **06**

- **STRUCTURE ASSESSMENT & LEGAL ASPECTS:** Art of structure assessment- method of testing- IS code for testing- safety assessment- legal aspects in connection to failure a repair. **03**

- **PREVENTIVE MEASURES FOR DURABILITY OF STRUCTURES:** Proper selection and specification for material- the use of modern techniques for construction- Proper design- better workmanship. **03**

[Total Theory Hours: 45, Tutorial Hours: 15]

CEST 206: Structural Vibration Control

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Understand different types of structural control methods
CO2	Apply techniques for vibration control to existing structures.
CO3	Understand the testing procedure for isolation system and energy dissipation devices Able to design composite slab deck shear diaphragms, shell roof structure and residential construction.
CO4	Design a vibration control technique for different types of dynamic induced loadings.
CO5	Describe about different types of energy dissipating devices.

2. Syllabus:

Topics	Hours
• Structural Control: Historical development of structural control and base isolation, active control, passive control, hybrid control, semi active control; Application to new and existing buildings.	11
• Theory of Vibration Isolation: Principle of base isolation; Theory of vibration isolation; Components of base isolation; Advantages and limitations; General Design Criteria; Linear and Nonlinear procedures of isolation design; Application of theory to multiple degree of freedom system	17
• Isolation Devices: Laminated rubber bearing, lead rubber bearing, high damping rubber bearing, PTFE sliding bearing, friction pendulum system and sleeved pile system; Modelling of isolation bearings; Design process for multilayered elastomeric bearings and buckling behaviour of elastomeric bearings; Isolation system testing.	11
• Energy Dissipation Devices: General requirements; Implementation of energy dissipation devices; Metallic yield dampers, friction dampers, viscoelastic dampers, tuned mass dampers, tuned liquid dampers; Shape memory alloy dampers; Modelling, linear and nonlinear procedures; Detailed system requirements; Application to multistorey buildings; Testing of energy dissipation devices.	06

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 207: Design of formwork systems

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Illustrate the requirement of formwork; classify the formwork systems and their selection; and choose the appropriate material
CO2	Determine the expected loads on formwork systems and calculate the permissible values
CO3	Design of formwork systems for the construction of various structural members.
CO4	Analysis of load distribution on shores and slabs in multi-story building frames.
CO5	Learn the causes of formwork failures and their preventive measures; study the applications of various special formwork.

2. Syllabus:

Topics	Hours
• Introduction: Formwork and falsework; Requirement of formwork; Selection of formwork; Classifications of formwork; Materials for formwork	07
• Formwork design concepts: Loads on formwork systems; Design aspects and assumptions; Permissible stresses and deflections as per IS codes	04
• Formwork for foundations and walls: Various components of formwork for foundations and walls and their design; Proprietary wall formwork systems	09
• Formwork for columns: Various components of formwork for columns and their design; Proprietary column formwork systems; Disposable column formwork.	08
• Formwork for beams and slabs: Various components of formwork for beams and slabs and their design; proprietary beam and slab formwork systems	05
• Formwork in multi-story building construction: Shoring, reshoring, back shoring and pre-shoring; Striking and cycle time; Simplified analysis and their assumptions and limitations; Load distribution on shores and slabs in multi-story building frames; Calculating the strength of the concrete slab at a given point in time	06
• Formwork failures: Causes of formwork failures; Deficiencies in designing; Preventive measures; Safety in formwork operations	02
• Special formwork: Flying formwork: table forms, tunnel formwork, column mounted shoring systems, gang forms; Slip formwork; Formwork for precast concrete; Formwork for bridge structures	04

CEST 204: Earthquake Resistant Design of Structures

L	T	P	C
3	0	2	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Describe the principles of engineering seismology
CO2	Calculate the lateral load distribution on RCC Building.
CO3	Categorize the irregularities in buildings as per the clauses given in Codal Provisions.
CO4	Analyze and Design earthquake resistant reinforced concrete buildings and water tank as per the Codal provision.
CO5	Deduce the concept of base-isolation and dampers in building.

2. Syllabus:

Hours

Topics

Seismic Hazard Assessment: Seismic Hazard Assessment: Engineering Seismology, Definitions, Introduction to Seismic hazard, Earthquake phenomenon, Seismo-tectonics and seismic zoning of India-Earthquake monitoring and seismic instrumentation, Characteristics of strong Earthquake motion, Estimation of earthquake parameter, Micro zonation	11
Lateral load on Buildings: Lateral load on Buildings: Rigid diaphragm effect, Centre of mass and centre of stiffness, Torsional coupled and uncoupled systems, Distribution of lateral force for One storey and Multiple stories building.	11
Structural Configuration of Buildings: Structural Configuration for earthquake resistant design, Concept of plan irregularities, soft storey, Torsion in buildings. Design provisions for these in IS-1893. The effect of infill masonry walls on frames. Modelling concepts of infill masonry walls. Behavior of masonry building during earthquake, failure patterns.	11
Concept of Earthquake Resistance Design: Concept of earthquake resistance design: Review of latest Indian seismic code IS 1893 (Part-1 and 2) and IS 4326 Provisions for buildings, Earthquake design philosophy, Analysis by seismic coefficient and response spectrum methods, IS 13920 Provisions for ductile detailing of RC building – beams, columns and joints. Earthquake analysis of elevated water tank, Model provisions for ground supported and elevated water tanks, impulsive and convective mass of water, Calculation of time period, Base shear, Base moments, Hydrodynamic pressure and sloshing wave height.	12

[Total Theory Hours: 45]

3. Practical:

- Vibration of single span beams with Mode Shapes
 - (a) One end fixed and other end free (Cantilever)
 - (b) One end fixed and other end hinged
 - (c) Both ends fixed
- Torsional Vibration of Fixed-free Three Rotor System
- Vibration Absorber (Rectilinear)
- Damped Torsional Vibration to determine Coefficient of Damping
- Linear Shake Table Experiment
- Single Point Vibration Measurement of Structure
- Non-destructive Testing
- Corrosion Rate Measurement by using Corrosion Analyser
- Rectangular Plates with Holes under In-plane Loads

CEST 208: Fire Resistant Design of Buildings

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Describing the importance of fire safety in building
CO2	Designing the structures for fire exposed conditions
CO3	Analysis and design of steel elements exposed to fire
CO4	Design of RCC elements exposed to fire
CO5	Learning provisions of NBC and relevant IS codes of practice

2. Syllabus:

Topics	Hours
• Introduction to Fire Safety in Buildings a) Objectives of fire safety b) Process of Fire Development c) Concept of fire safety d) Objective of fire resistance e) Controlling Fire spread	09
• Design concept for structures Exposed to Fire a) Structural Design at Normal Temperature b) Structural Design in fire condition c) Design of Individual Members exposed to fire d) Design of structural assemblies exposed to fire	11
• Steel Structures a) Fire Resistance ratings b) Steel Temperatures and Protection systems c) Properties of steel at elevated temperature d) Design of individual members exposed to fire	11
• Concrete Structures a) Behavior of concrete under fire b) Fire Resistance ratings c) Concrete and Reinforcing Steel Temperatures d) Properties of concrete at elevated temperature e) Design of individual members exposed to fire	08
• Provisions of NBC and relevant IS codes of practice	06

CEST 209: Design of Bridge Structures

L	T	P	C
3	1	0	4

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Demonstrate state-of-the-art practice including fundamental knowledge of relevant code specifications in bridge engineering.
CO2	Analyze and design the bridge components such as superstructures, substructures, bearings and deck joints.
CO3	Design short and medium span bridges using existing code of practice by taking into account the structural strength, serviceability and durability aspects.
CO4	Evaluate the special features of Prestressed concrete bridges, Balanced cantilever and Cable stayed bridges.
CO5	Analyze the bridge structures by various methods.

2. Syllabus:

Topics	Hours
INTRODUCTION TO BRIDGES: Introduction to bridges - definition and basic forms - bridge hydraulic and scour- component of bridge- classification of bridges- introduce the importance of construction methods in design and vice versa- short history of bridge development- site selection and soil exploration for site importance of hydraulic factors in bridge design- general arrangement of drawing computation of discharge- linear waterway- economic span- Introduction to Indian Road Congress (IRC)- load distribution theory- bridge slab- effective width- introduction to methods as per national standard IRC- and international Federal Highway Administration (FHWA) and American Association of State Highway and Transportation Officials (AASHTO)- different types of bridges- impact factor- IRC Loads- wind load- centrifugal forces- economic span length- foundation for bridges- abutments. Introduction to relevant softwares.	07
DESIGN OF T BEAM AND DECK SLAB OF BRIDGES: Standard and general features for road bridges (width of carriageway- clearance- load to be considered using IRC dead load- impact load- wind load- longitudinal forces- centrifugal forces- horizontal forces due to water current and Buoyancy effect- earth pressure- design of T beam bridges (up to three girders only) proportioning of components- constructability evaluations- QA/QC- plans- specifications and estimates- analysis of slab using IRC Class AA tracked vehicle- structural design of slab- analysis of cross girder for dead load & IRC Class AA tracked vehicle- structural design of cross girder- analysis of main girder using Courbon's method-calculation of dead load BM and SF- calculation of live load B M & S F using IRC Class AA Tracked vehicle- structural design of main girder- Courbon's Method- Guyon- Massonet Method- Hendry Jaegar Method- Eccentric and Multiple concentric loads.	09
DESIGN OF T BEAM AND DECK SLAB OF BRIDGES: Standard and general features for road bridges (width of carriageway- clearance- load to be considered using IRC dead load- impact load- wind load- longitudinal forces- centrifugal forces- horizontal forces due to water current and Buoyancy effect- earth pressure- design of T beam bridges (up to three girders only) proportioning of components- constructability evaluations- QA/QC- plans- specifications and estimates- analysis of slab using IRC Class AA tracked vehicle- structural design of slab- analysis of	09

cross girder for dead load & IRC Class AA tracked vehicle- structural design of cross girder- analysis of main girder using Courbon's method-calculation of dead load BM and SF- calculation of live load B M & S F using IRC Class AA Tracked vehicle- structural design of main girder- Courbon's Method- Guyon- Massonet Method- Hendry Jaegar Method- Eccentric and Multiple concentric loads.

- **SUBSTRUCTURES AND SUPERSTRUCTURES:** Design of Piers and abutments- introduction to bridge bearings- hinges and expansion joints. (no design)- methods for bridge superstructure design- methods for bridge substructure design- bridge deck and appurtenant structures; bridge bearings and expansion joints- functions- types and selection of bearings- bearing materials- design of elastomeric bearings for different conditions- expansion joints- types of expansion joints 07
- **PRESTRESSED CONCRETE BRIDGES:** Introduction to pre-stressed concrete bridges (design concept only)- determination of minimum section modulus- prestressing force and eccentricity (deviation not necessary)- substructures: analysis and design of abutment and pier detailing- derive equilibrium equations in Cartesian and cylindrical polar coordinates. 07
- **BALANCED CANTILEVER BRIDGES:** Components of balance cantilever bridge. the outer beam, cantilevers and central beam. Suspended beam. Design of prestressed concrete sections – Design of pretension and post tensioned Flexural member statically indeterminate Prestressed Structures 06
- **CABLE STAYED BRIDGES:** Cable bridge features, Components: Pylon's configurations, Deck girders, Anchorages, Cable stays- design principles- advantages- arrangement of stay cables, Types of towers, Linear analysis of cables and towers 07

[Total Theory Hours: 45, Tutorial Hours: 15]

CEST 210: Advanced Design of Steel Structures

L	T	P	C
3	1	0	4

1. Course Outcome (COs):

At the end on the course the students will be able to:

CO1	Evaluate knowledge and proficiency to apply the provision of relevant IS code for design of various steel structures and behavior and its connection and limitation in design.
CO2	Design of beam-column and industrial building components for various need of infrastructure.
CO3	Enhance the knowledge for advanced design for torsion, fatigue and fire-resistant design.
CO4	Conceptualize the space structure like grid, dome, suspended roof structure and its approximate analysis method.
CO5	To make synthesis of planning and design of steel infrastructure and innovate space structure.

2. Syllabus:

Topics	Hours
• Design of Beam-Column: General behavior, second order movement in beam-column, elastic torsion buckling of beam-column, beam-column under biaxial loading, code design procedure, design of beam-column example, crane column, design of eccentrically loaded base plate	10
• Design of Industrial Building Components: Design of Gantry Girder, Plastic analysis and Design of rectangular portal frame and gable portal frame, design of steel tower, chimney, Pre-Engineering Building.	09
• Design for Torsion: Torsional loading in practice, behavior of member due to torsion, approximate design procedure for torsion, torsional stiffening, torsional buckling, torsional deformation	07
• Fatigue Resistance Design: Different approaches to fatigue analysis, fatigue loading, general guidelines for fatigue resistance design – example	07
• Fire Resistance design of steel structures: Fire engineering design of steel structures, calculation approach, design curves and fire modals	04
• Steel space structure: Single and multilayer grids, braced domes, cable suspended roof structure, approximate method of analysis of space structures, overview of steel bridges.	08

CEST 301: Seminar

L	T	P	C
0	0	0	- 4 -

1. Course Outcomes (COs):

At the end on the course the students will be able to:

CO1	Explore the literature to identify a relevant problem in structural engineering
CO2	Assemble the literature to compose a specific problem in practice
CO3	Expose the study to demonstrate the understanding of chosen problem.
CO4	Compile the seminar report to demonstrate written communication skills
CO5	Prepare presentation to demonstrate verbal communication skills.

2. Syllabus:

The candidate-is given state of art areas to be explored a specific problem especially with field/practical applications. Sponsored research areas can also be investigated. Industry related problems, Codal specification examinations, new areas of material research, are some of the key features of the seminar. The candidate will study. complete state of art literature review and present the same before the jury. The assessment will be done based on the above mentioned aspects.

3. CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	0	2	1	2	3
CO2	3	2	3	1	2	3

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 302: Dissertation Preliminaries

L	T	P	C
0	0	0	16

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Construct a problem statement in advanced structural engineering based on a survey of pertinent literature
CO2	Devise the objective and scope based on research gap identified through critical literature review
CO3	Develop the methodology including tools and techniques to be used in alignment with the scope and objectives
CO4	Execute the theoretical framework of Experimental/Analytical/Numerical investigations
CO5	Prepare the detailed report and presentation to exhibit written and oral communication skills

2. Syllabus:

- The work is assigned to the students immediately after the second semester examination. Thus, the candidate starts working on the given problem during the summer vacation prior to commencement of third semester.
- The preliminary work involved is related to a state-of-art literature review, identification of the area and finalization of the specific problem, with clearly defined title. The presentation of the preliminary-Part 1 is addressed as the 1st stage seminar of the proposed dissertation work. The candidate is expected to present the plan of action and review of the published work related to the area.
- The candidate should submit the report of their 1st Stage and a presentation about the same will be conducted thereafter in front of internal examiners.

3. CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	2	3	2	3	2
CO2	3	2	3	3	3	3
CO3	3	2	3	2	3	3

CO5	0	3	3	0	2	1

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially

CEST 303: Dissertation

L	T	P	C
0	0	0	20

1. Course Outcomes (COs):

At the end of the course the students will be able to:

CO1	Plan the investigations and compile sufficient data to meet the goals
CO2	Analyze the data by employing the appropriate technique(s) to make relevant conclusions
CO3	Develop the analytical /numerical/empirical model using advanced tools and techniques
CO4	Organize the research work in order to prepare the dissertation report according to the specified format
CO5	Defend the project work using a PowerPoint presentation that exhibits the mastery on chosen topic

2. Syllabus:

- After obtaining the approval along with necessary modification from the jury, the candidate proceeds for the second stage of the dissertation work. During this presentation the candidate should submit the report of their project till work. The second stage of dissertation work, which can be termed as the core part can be carried out at any of the advanced institutions, laboratories, centre-of-excellence places, with whom prior permission is obtained through MoU. The MoU can be with the industry, laboratories, and universities, all around the world. A presentation about the same will be conducted thereafter in front of internal examiners.
- Candidates for master's degrees should write and defend a thesis. The candidate should format the thesis as per the guidelines of Institution. The student will open the oral defense with a brief presentation of his or her findings in front of external examiners. After which the members of the thesis committee will question the candidate in an order determined by the advisor. The student should be evaluated upon both:
 - 1) The overall quality and significance of his or her thesis, and
 - 2) The oral defense of his or her findings.

3. CO-PO-PSO Mapping:

	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO1	3	2	3	2	3	2
CO2	3	2	3	3	3	3
CO3	3	2	3	2	3	3
CO4	3	1	3	3	3	3
CO5	0	3	3	0	2	1

Note: - 0: Not related, 1: Slightly, 2: Moderately, 3: Substantially
