

Dr. KUNISSETTI V PRAVEEN KUMAR

kvpraveenkumar15@gmail.com, kvpraveenkumar@eed.svnit.ac.in

PRESENT ADDRESS

K. V. Praveen Kumar, Assistant Professor,
Department of Electrical Engineering,
Sardar Vallabhbhai National Institute of Technology, Surat,
Gujarat, 395007.

EXPERIENCE

Name of the Institution	Designation	Date of Joining	Date of Relieving
Gayatri Vidya Parishad College of Engineering, Visakhapatnam, Andhra Pradesh	Assistant Professor	10/11/2018	05/09/2019
Sardar Vallabhbhai National Institute of Technology, Surat	Assistant Professor	30/09/2019	----

EDUCATION

Name of the Institution	Years Attended		Qualification Obtained	Class of Honor	Percentage	Course of Study
	From	To				
National Institute of Technology Warangal	17/07/2015	18/04/2019	PhD	-NA-	-NA-	Power Electronics and Drive

SPONSORED PROJECTS

	Project Title	Sponsoring Agency	Project Duration	Amount	Status
1	Development of enhanced Predictive Current Control and Predictive Torque Control strategies for Open-end Winding Permanent Magnet Synchronous Motor drive with less torque ripple for Electric Vehicles	Science and Engineering Research Board (SERB)	02 Years	28,96,910.00	On-going
2	Simplified Predictive Torque Control Strategies for an Induction Motor Drive	SVNIT-SEED Money	02 Years	10,00,000.00	On-going

ACADEMIC PROJECTS

Research Interests

Power Electronics, Multi-level Inverters, DTC for AC motor Drives, Model Predictive Control for AC motor Drives (including Special Machines).

Doctor of Philosophy

Title: Investigation of Direct Torque Control and Predictive Torque Control Strategies to an Open-end Winding Induction Motor Drive.

The doctoral thesis introduces effective voltage switching state algorithms for a direct torque controlled OEWIM drive to reduce torque and flux ripples with three and four-level inversion schemes. The switching state algorithms are implemented by considering operating speed of OEWIM drive. The proposed algorithms do not increase complexity. The developed DTC strategies maintain lesser ripple in torque, flux and less CMV. The limitation of classical PTC is variable switching frequency. In this thesis, an attempt is made to reduce switching frequency, torque and flux ripples by using multi-level inverter fed OEWIM configuration. This thesis describes the implementation of predictive torque controlled OEWIM with four-level inversion. To simplify the tuning of weighting factors, in this thesis, normalized weighted sum model is introduced to optimize the cost function. Another PTC strategy introduced to an OEWIM drive, to eliminate weighting factors. This uses two cost functions, one cost function is to reduce the flux ripple and the other cost function is to reduce the torque ripple.
