2. Principal Research Interests

Our group focuses on the fundamental and applied problems in analytical, bioanalytical and environmental sciences using a diverse set of functional nanomaterials integrated analytical techniques. We design and fabricate functional nanomaterials to study their outstanding optical properties with various applications ranging from bioimaging to drug delivery and nanosensors (colorimetric and fluorescent probes). Additionally, our group also focuses on the green synthetic approaches for the fabrication of functional nanomaterials and their analytical applications and biological activities. Another major focus in the groups is on the applications of MALDI- and ESI- MS techniques for detection of biomolecules.
